## Press release

# MINSAIT IS LEADING THE DEVELOPMENT OF PLATOON ANALYTIC TECHNOLOGIES, THE H2020 PROJECT THAT WILL DRIVE THE ENERGY TRANSITION

- **The main benefits expected from this innovation project are the increase in renewable energy generation availability, a more efficient network with fewer failures, and the reduction of the cost of energy bills**
- **The Indra company will contribute all of its knowledge for the development and use of an open and interoperable architecture that will facilitate the construction and deployment of power management solutions that will contribute to a greater consumption of renewable energy, proactive and real-time operation of distribution networks and the predictive maintenance of assets**

**Madrid, March 18, 2020.-** Minsait, an Indra company, is leading the development and integration of advanced analytics technologies and Internet of Things of PLATOON (Digital PLATform and analytic TOOlS for eNergy), a project funded by the Horizon 2020 program of the European Union whose objective is the development of a new generation of digital solutions and products that will accelerate the gradual decarbonization of economy and energy efficiency.

Thanks to this project, renewable generation companies will be able to improve forecasting and maximize the value and availability of their generation in the energy system. In addition, it will increase the reliability and efficiency of the grid, which will have fewer incidents thanks to the energy flexibility available in the connected energy resources. Customers and prosumers can also participate in the provision of services and reduce the cost of their energy bills

Minsait will contribute its experience to build an open Internet of Things and Big Data platform as an interoperability element to enable a Marketplace that includes advanced solutions and services for asset management, microgrids and energy efficiency developed from data analysis and distributed/edge computing technologies.

In addition, the Indra subsidiary will actively participate in the project pilots with Active Grid Management (AGM) and Asset Performance Management (APM), its solutions for the smart management of networks and distribution assets developed within its Onesait Utilities Grid suite, already implemented in more than 300 utilities worldwide.

AGM is the Industrial Internet of Things solution developed by Minsait to help with the dynamic, proactive, distributed and intelligent operation of medium and low voltage power grids. For its part, APM provides predictive maintenance based on the measurement of the health index of the facilities and devices.

The company will also participate in the measurement of the impact on the utilities business in order to accelerate the go-to-market of the new generation of systems and platforms that are developed within the PLATOON framework.

## Press release

PLATOON, led by the French company ENGIE and coordinated by Tecnalia, will provide a new generation of tools to ensure reliable and efficient coordination of the main generators, network operators, representation agents and millions of prosumers and distributed energy resources. It has a budget of €11.5 million and is expected to finish in late 2022.

Minsait is regarded as one of the main technological partners, which can help companies to overcome the challenges of the global energy transition, thanks to the Onesait Utilities Grid, its comprehensive solution for the smart and integrated management of distribution networks and its ability to provide new digital services. The Gartner Market Guide for Advanced Distribution Management Systems (ADMS) highlights Minsait as a leading provider in this area. The company has also been recognized as a “Major Player” in the “EMEA Service Providers for Digital Grid Enablement 2019” report of the IDC.

### About Minsait

Minsait, an Indra company ([www.minsait.com](http://www.minsait.com)), is a leading firm in Digital Transformation Consultancy and Information Technologies in Spain and Latin America. Minsait possesses a high degree of specialization and knowledge of the sector, which it backs up with its high capability to integrate the core world with the digital world, its leadership in innovation and digital transformation, and its flexibility. In this way, it focuses its range of products and services on high-impact value propositions, based on end-to-end solutions, with a remarkable degree of segmentation. This enables it to achieve tangible impacts for its customers in every industry, with a transformational focus. Its capabilities and leadership are demonstrated in its product range, under the brand name Onesait, and its across-the-board range of services.

### About Indra

Indra ([www.indracompany.com](http://www.indracompany.com)) is one of the leading global technology and consulting companies and the technological partner for core business operations of its customers world-wide. It is a world-leader in providing proprietary solutions in specific segments in Transport and Defence markets, and a leading firm in Digital Transformation Consultancy and Information Technologies in Spain and Latin America through its affiliate Minsait. Its business model is based on a comprehensive range of proprietary products, with a high-value focus and with a high innovation component. In the 2019 financial year, Indra achieved revenue of €3,204 billion, with more than 49,000 employees, a local presence in 46 countries and business operations in over 140 countries.
