

THE miDGT APP, DEVELOPED BY INDRA AND MINSAIT FOR THE SPANISH DIRECTORATE-GENERAL FOR TRAFFIC (DGT), HAS BEEN DOWNLOADED OVER TWO AND A HALF MILLION TIMES

- **The digital driving license has enabled the DGT to improve the service it provides to the general public, who can simply and conveniently generate and check their digital permits, update their data, pay fees and obtain reports on their vehicles via the new application**
- **The user experience, accessibility, security and numerous practical operations are the reasons for the app's success**
- **In this project, Indra and Minsait have pooled together their unique capabilities, knowledge and experience in transportation, smart mobility, and the digitization of public authorities and the user experience**

Madrid, March 1st, 2021.- The miDGT application, developed by Indra, one of the leading global technology and consulting companies, and Minsait, its subsidiary at the forefront of the digital transformation and Information Technologies consultancy, in partnership with the IT Department of the Spanish Directorate-General for Traffic, has been downloaded more than two and a half million times in less than a year in existence.

Not only is this pioneering mobile application a digital license with full legal validity for driving within the country, it is a direct communication channel with the authority for the general public and a space where vehicle documentation can be obtained and different operations and procedures can be performed. Thus, around 900,000 users have been able to update their contact details and addresses, generate nearly 800,000 digital vehicle registration certificates and driving licenses (which have been verified 40,000 times) and easily obtain more than 220,000 basic reports on their vehicles.

Thanks to the new features that were launched in November 2020, more than 8,000 citizens have also downloaded a full report on their car, a document which is highly useful when it comes to selling a second-hand vehicle. They've also paid more than 13,000 fees (e.g. to modify a car's ownership) and shared their vehicles' documentation more than 8,000 times (e.g. in the case of family vehicles registered under the name of a single person to enable a regular driver who isn't the vehicle owner to obtain all its documentation).

The miDGT app also allows users to check the points on their driving license, informing them of the expiry of their insurance policy or vehicle inspection test and sending out any news of interest.

The excellent usage figures recorded by the miDGT app demonstrate that it meets the real needs of the general public, who are increasingly demanding the ability to manage their relationship with the authorities and perform their operations digitally for greater convenience and savings in terms of time and money. In addition to facilitating numerous practical procedures and meeting the strictest security requirements, the miDGT app is fully accessible and the design offers an excellent user experience.

The app is ready to incorporate new features and more personalized notifications. Version 3 of the app will be launched shortly, allowing authentication by means of the user data in the DGT's possession, provided that it has a previously registered contact phone number to which to send an SMS. It will also be possible to identify a driver who isn't the owner of the vehicle in the event of a report and manage its usual driver or drivers. Reports can be viewed and fines can be paid by means of use of the Minsait Onesait Payments gateway.

The partner for major digitization projects in transportation

Key to the success of this innovative project, developed in close collaboration with the DGT, has been the sum total of Indra's capabilities, knowledge and experience in transportation and smart mobility and Minsait's work in the digitization of public authorities and disruptive technologies that make a big impact on user experience.

The synergies of the work teams at the two companies have made it possible to develop an application that places the DGT at the global forefront, brings this agency closer to the public at large and contributes to improving road safety.

This important benchmark positions Indra as the best technological partner for highly advanced digital transformation projects in transportation and ensuring that new mobility models materialize.

Indra and Minsait have also recently been chosen by Puertos del Estado [National Port Authority], ADIF [National Railways Administration] and the Ministry of Transport, Mobility and Urban Agenda to carry out the SIMPLE (SIMplification of Processes for Logistic Enhancement) project, during which it will develop and implement the Spanish logistics single window. This is a strategic national logistics project that also positions Spain at the forefront of Europe with regard to the use of technology, in this case to improve the efficiency and sustainability of freight transportation.

The pioneering technological platform will bring all the information on the logistics chain together and ensure interoperability between the different national freight transportation modes and nodes, as well as its international integration, thus optimizing the efficiency and security of transactions. It will guarantee the traceability of the documentation and cargo by means of blockchain technology, enabling all the agents and transport modes in the logistics chain to interact electronically by digitizing and integrating their data and documents.

Indra has unique experience in transportation, with more than 2,500 projects developed in more than 100 cities and more than 50 countries. Indra Mova Solutions, its Transportation Division, covers the entire life cycle of its customers' projects and combines the new digital capabilities, integration, specialization and innovation required by the market, with reliability, business knowledge, Indra's proprietary technology for transportation and the vast experience of its team of professionals.

As for Minsait, it provides valuable solutions and services for citizens that contribute to improving access to the authorities and promoting citizen participation in public initiatives, as well as the daily work of public employees. The company is currently running more than 700 projects in 26 countries and more than 250,000 public employees interact with its solutions. Onesait Government is its suite of solutions to overcome the challenges facing public authorities and meet the needs of the general public.

About Minsait

Minsait, an Indra company (www.minsait.com), is a leading firm in Digital Transformation Consultancy and Information Technologies in Spain and Latin America. Minsait possesses a high degree of specialization and knowledge of the sector, which it backs up with its high capability to integrate the core world with the digital world, its leadership in innovation and digital transformation, and its flexibility. Thus, it focuses its offering on high-impact value propositions, based on end-to-end solutions, with a remarkable degree of segmentation, which enables it to achieve tangible impacts for its customers in each industry with a transformational focus. Its capabilities and leadership are demonstrated in its product range, under the brand Onesait, and its across-the-board range of services.

About Indra

Indra (www.indracompany.com) is one of the leading global technology and consulting companies and the technological partner for core business operations of its customers world-wide. It is a world-leader in providing proprietary solutions in specific segments in Transport and Defense markets, and a leading firm in Digital Transformation Consultancy and Information Technologies in Spain and Latin America through its affiliate Minsait. Its business model is based on a comprehensive range of proprietary products, with a high-value focus and with a high innovation component. In the 2020 financial year, Indra achieved revenue of €3.043 billion, near 48,000 employees, a local presence in 46 countries and business operations in over 140 countries.
