

INDRA EXHIBITS CUTTING-EDGE SOLUTIONS FOR THE ARMIES OF THE FUTURE AT THE WORLD DEFENSE SHOW

- Indra is working on highly ambitious international defence programs that are set to shape the future of the sector, including the FCAS and the development of the Eurofighter
- In Riyadh, it will showcase the infrared countermeasure solution that it is implementing for the Spanish Air Force's A400M and Chinook, as well as state-of-the-art virtual reality-based training solutions

Madrid, March 7, 2022.- Indra, one of the leading global technology and consulting companies, is attending the World Defense Show that is being held in Riyadh from March 6 to 9 as one of the major global leaders of the sector and a company that is equipping the world's most advanced armies with cutting-edge digital solutions to enable them to address the threats that will emerge in the coming years.

The company stands out among the 800-plus companies registered for this event as one of the coordinators of the FCAS, the largest and most advanced defence program to date in Europe. It is a project that addresses the development of a Future Combat Air System based on a next-generation aircraft that will be escorted by several unmanned aircraft or 'carriers' and operated in a combat cloud, exchanging real-time data with all kinds of air, ground and naval platforms deployed in the field.

The company is also the second supplier of avionics systems for the Eurofighter, one of the most advanced multi-role fighters in existence, and one of the world's leading radar suppliers; its Lanza 3D is one of NATO's favorite systems.

In Riyadh, the company will present its InShield infra-red countermeasure systems that will equip iconic aircraft in the defence world, including the A400M and the Chinook. The solution has the capability to simultaneously neutralize multiple attacks with manpad missile launchers.

Indra will also showcase the latest virtual and mixed reality applications for military training at its stand. Its Victrix system plunges soldiers into a virtual scenario in which they can train for combat missions in urban areas. This technology can connect several squads of soldiers located on different bases or areas of operations so that they can prepare for joint missions as if they were in the same place.

As a leader in the field of simulation, the company will give the people who visit its stand the chance to put on virtual reality goggles and go on a virtual flight aboard one of its top-level helicopter simulators where elite pilots are trained.

Meanwhile, Francisco Jiménez, Director of Integrated Defence Systems at Indra, will take part in the panel discussion titled *Space: the next frontier* to discuss the growing importance of this new defence domain and the opportunities it opens up for cooperation between companies. Indra has developed ground segments for military radar Earth observation satellites that are currently in service. It is also working on several projects to deploy mega-constellations of small satellites and it has provided the Spanish Air Force with a powerful space surveillance radar.

Indra is one of the hundred largest defence companies in the world and is developing next-generation technologies to enable armies to prevail in the highly digitalized theaters of operations of the future. The company is facilitating the digital transformation of armies through artificial intelligence, combat clouds, hyperconnectivity, quantum communications, new sensors, mission systems, command and control and cyberdefence.

About Indra

Indra (www.indracompany.com) is one of the leading global technology and consulting companies and the technological partner for core business operations of its customers worldwide. It is a world-leader in

providing proprietary solutions in specific segments in Transport and Defence markets, and a leading firm in Digital Transformation and Information Technologies in Spain and Latin America through its affiliate Minsait. Its business model is based on a comprehensive range of proprietary products, with a high-value, end-to-end focus and with a high innovation component. In the 2021 financial year, Indra achieved revenue of €3.390 billion, with over 52,000 employees, a local presence in 46 countries and business operations in over 140 countries.
